Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson, US Patent 3,237,238, in view of Marquardt, US Patent 3,959,849, or Ezman, US Patent 5,671,502, or Becken, US Patent 6,588,061. Anderson provides a snap-in roller assembly that may be used for patio doors, comprising an outer housing 17 having an outer surface; an inner housing 19, at least two roller wheels 13 affixed to the inner housing to maintain the wheels in a fixed position relative to each other; an adjustment mechanism 23 which adjusts the inner housing to a desired position within the outer housing. Mounting tabs 29 are provided.

Anderson discloses each and every aspect of the claimed invention except for at least one retaining member incorporated into the outer housing, as claimed. Such means of retaining members are well known in the art. Each of Ezman, Marquardt, and Becken teach the general concept of retaining members, meeting

Marquardt, and Becken teach the general concept of retaining members, meeting the claimed limitations (Ezman: elements 27, 28; Marquardt: elements 32; and Becken: see the below image). These retaining members are for limiting movement of the housings and securing it within a frame, as conventional in the art. It would have been obvious at the time the invention was made for one skilled in the art to have included in the design of Anderson such a modification, as generally taught in each of Ezman , Marquardt, and Becken, for the purpose of providing means for limiting movement of the housings and securing it within a frame.

The claimed method is inherent to the design.
